US-08-774-310-77

US-08-774-310-77

Sequence 77, Application US/08774310

Patent No. 5877022

GENERAL INFORMATION:

APPLICANT: Stinchcomb, Daniel T.

APPLICANT: Mewton, Roger S.

APPLICANT: Mewton, Roger S.

APPLICANT: Randarack, Randy

TITLE OF INVENTION: RIBOZYNE TREATMENT OF DISEASES

TITLE OF INVENTION: PLASMA LIPOPROTEIN (a) [LP(a)] BY

TITLE OF INVENTION: INHIBITING APOLIPOPROTEIN

TITLE OF INVENTION: INHIBITING APOLIPOPROTEIN

TITLE OF INVENTION: INHIBITING APOLIPOPROTEIN

MUMBER OF SEQUENCES:

ADDRESSEE: Lyon & Lyon

STREET: Suite 4700

CITY: Los Angelss

COUNTRY: U.S.A.

ZIP: 90011

Sequence 7032, Application US/09371772B

Patent No. 6566127

GENERAL INFORMATION:

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Baccobed, Jaime

APPLICANT: Baccobed, Jaime

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re

TITLE OF INVENTION: Levels of Vascallar Endothelial Growth Factor Receptor

TITLE OF INVENTION: Levels of Vascallar Endothelial Growth Factor Receptor

TITLE OF INVENTION: Levels of Vascallar Endothelial Growth Factor Receptor

CURRENT APPLICATION NUMBER: US/09/371,72B

CURRENT FILING DATE: 1995-00-26

PRIOR FILING DATE: 1995-00-26

PRIOR FILING DATE: 1996-01-08

NUMBER OF SEQ ID NOS: 14225

SSOFTARRE: Patentin Version 3.0

LENGTH: 16
                           US-09-043-816E-40/c

Sequence 40, Application US/09043816E

Fatent No. 6414128

Japticant: Wilson, Tracy

APPLICANT: Wilson, Tracy

APPLICANT: Micola, Nicos A.

APPLICANT: Moola, Warren S.

APPLICANT: Mocalif, Donald

APPLICANT: Mg, Ashley

TITLE OF INVENTION: A NOVEL HAEMOPOIETIN RECEPTOR AND GENETIC SEQUENCES

TITLE OF INVENTION: BNCODING SAME

FILE REFERENCE: 11268

CURRENT APPLICANT: US/09/043,816E

CURRENT FILING DATE: 1998-09-17

NUMBER OF SEQ ID NOS: 44

Patent No. 5614617

GENERAL INFORMATION:

APPLICANT: Cock and Sanghvi

TITLE OF INVENTION: Modified Oligonucleotides that Detect and Modulate

TITLE OF INVENTION: Gene Expression

NUMBER OF SEQUENCES: 65

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Sequence 10, Application US/08459434

Patent No. 5969116

GENERAL INFORMATION:

TITLE DE INVENTION:

TITLE OF INVENTION:

CORRESPONDENCES:

ADDRESSEE: No. 5969116artis Corporation

STATE: New Jersey

CONFORTER: New Jersey

CONFORTER: ISP PROPER

MEDIUM TYPE: Floppy disk

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMBUTER: IBM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PATENTION PATA:

HING DATE: US/08/459,434

FILING DATE:

WAPPLICATION NUMBER: US/08/459,434
| Sequence 25, Applic.
| Patent No. 584170:
| GENERAL INFORMATION:
| APPLICANT: Brzezinski, Ryszard
| APPLICANT: Bearlieu, Carole
| TITLE OF INVENTION: Thermostable Xylanase DNA, Protein and
| TITLE OF INVENTION: Methods of Use
| NUMBER OF SEQUENCES: 67

RESULT 421
US-08-529-190B-5
is Sequence 5, Application US/08529190B
is Patent No. 583391
GENERAL INFORMATION:
APPLICANT: Masucci, Maria G.
TITLE OF INVENTION: GLYCINE-CONTAINING SEQUENCES
TITLE OF INVENTION: CONFERRING INVISIBILITY TO THE IMMUNE SYSTEM
NUMBER OF SEQUENCES. 76
CORRESPONDENCE ADDRESS:
ADDRESSE: Banner & Witcoff, Ltd.
STREET: One Financial Center
CITY: Boston
STREET: DAS
COUNTRY: USA
COUNTRY: USA
INCOMPUTER READABLE FORM:
MEDIUM TYPE: DISKette
COMPUTER: IBM Compatible
OPMETATING SYSTEM: DOS
SOFTWARE: Wordperfect 6.1
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/529,190B
FILING DATE: 10-APP-1995
RIGNG APPLICATION NUMBER: SE9501324-9
FILING DATE: 10-APP-1995
RIGNG APPLICATION NUMBER: SE9501324-9
FILING DATE: 10-APP-1995
FILING DATE: 01-SEP-1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 104, Application US/09723909

Patent No. 6630141

GENERAL INFORMATION:
APPLICANT Georgopoulos, Katia A.
TITLE OF INVENTION: IKAROS: A T CELL PATHWAY REGULATORY GENE
NUMBER OF SEQUENCES: 202
                                                                                                                                                                                                                                                  Sequence 104, Application US/08711417C
Patent No. 6228611
GENERAL INPORMATION:
APPLICANT: Georgopoulos, Katia A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   С
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 433

US-08-311-760A-185/c

1Sequence 185, Application US/08311760A

Sequence 186, Application US/08311760A

Patent No. 5599706

GENERAL INFORMATION:

APPLICANT: Stinchoomb, Dan T.

APPLICANT: McSwiggen, James

APPLICANT: McSwiggen, James

APPLICANT: Rambarack, Randy

TITLE OF INVENTION: RIBOZYME TREATMENT OF DISEASES

TITLE OF INVENTION: RIBOZYME TREATMENT OF LEVELS OF

TITLE OF INVENTION: PLASMA LIPOPROTEIN (a) [LP(a)] BY

TITLE OF INVENTION: INHIBITING APOLIPOPROTEIN

TITLE OF INVENTION: INHIBITING APOLIPOPROTEIN

TITLE OF INVENTION:

NUMBER OF SEQUENCES: 392

CORRESPONDENCE ADDRESS:

Sequence 37. Application US/09054832
Patent No. 6312894
GENERAL INFORMATION:
TATLE OF INVENTION:
TITLE OF INVENTION: MISMATCH DISCRIMINATION USING OLIGONUCLECTIDES
TITLE OF INVENTION: CONUGATED TO MINOR GROOVE BINDERS
NUMBER OF SEQUENCES:
ADDRESSEE: MORRISON & FORESTER
STREET: 755 PAGE MILL ROAD
CITY: PALO ALTO
STATE: CA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

US-08-021-619-1/c

Sequence 1, Application US/08021619

Patent No. 5326696

GENERAL INFORMATION:

APPLICANT: Chang, Tree Wen

TILLE OF INVENTION: Method for selecting low frequency

TILLE OF INVENTION: Matigen-specific single B lymphocytes

NUMBER OF SEQUENCES: 16

CORRESPONDENCE ADDRESS:

ADDRESSER: Tanox Blosystems, Inc.

STRET: 10301 Stella Link Rd.

CITY: Houston
STATE: Texas

COMPTRY: USA

ZIP: 77025

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                        Sequence 37, Application US/09640953
Patent No. 6492346
GENERAL INFORMATION:
APPLICANT: Meyer, Rich
TITLE OF INVENTION: IMPROVED HYBRIDIZATION AND
CONJUGATED TO MINGATCH DISCRIMINATION USING OLIGONUCLEOTIDES
CONJUGATED TO MINOR GROOVE BINDERS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 0.5%; Score 10.8; DB 1; Length 14; Best Local Similarity 85.7%; Pred. Sequence 3, Application US/07799824
Patent No. 5484508
GENERAL INFORMATION:
APPLICANT: Froehler, Brian
APPLICANT: Jones, Robert J.
TITLE OF INVENTION: Enhanced Triple-Helix and
TITLE OF INVENTION: Containing Modified Pyrimidines
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSEE: Morrison & Foerster
STREET: 545 Middlefield Road, Suite 200
CITY: Menlo Park

Sequence 7, Application US/07799824

Patent No. 548490B
GENERAL INFORMATION:
APPLICANT: Froehler, Brian
APPLICANT: Jones, Robert J.
TITLE OF INVENTION: Double-Helix Formation Directed by Oligonucleotides
TITLE OF INVENTION: Containing Modified Pyrimidines
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSEE: Morrison & Poerster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

Sequence 40, Application US/07976103A

Patent No. 5645985

Papticant: Wachele, Brian

APPLICANT: Wachele, Rick

APPLICANT: Wachele, Rick

APPLICANT: Wachele, ARNCLD J.

APPLICANT: PUDLO, JEFF

TITLE OF INVENTION: ENHANCED TRIPLE-HELIX AND DOUBLE-HELIX

TITLE OF INVENTION: ENHANCED TRIPLE-HELIX AND DOUBLE-HELIX

TITLE OF INVENTION: ENHANCED TRIPLE-HELIX AND DOUBLE-HELIX

TITLE OF INVENTION: FORMATION WITH OLIGOMERS CONTAINING MODIFIED FYRIMIDINES

TITLE OF INVENTION: ENHANCED TRIPLE-HELIX

APPLICANTS

TITLE OF INVENTION: ENHANCED TRIPLE-HELIX

TITLE OF INVENTION: ENHANCED TRIPLE-HELIX

TITLE OF INVENTION:

TITLE OF INVENTION

TITLE OF INVENTION

TITLE OF INVENTION

TORRET: 333

CORRESSPONDENCE ADDRESS:

APPLICATION OFFICE TORS

CONTURY: Called Drive

CONTURY: Energible

COMPUTER: ENHANCED TRIPLE-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

PAPLICATION NUMBER: US/07/976,103A

FILING DATE: 25-NOV-1992

PATORDENCY ADDRES: 25-NOV-1992

PATORDENCY ADDRES: 25-NOV-1992

CLASSIFICATION NUMBER: US/07/976,103A

FILING DATE: 25-NOV-1992
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..
